DETAILED ACTION

Allowable Subject Matter

1. Claims 1-4 are allowed. The following is an examiner's statement of reasons for allowance:

Claims 1,3: the prior art fails to teach or make obvious: A motor power line break detection method of an AC servo driver comprising: a current detector; and a torque controller, the method comprising the steps of: extracting a torque current component from a three-phase AC detected by the current detector, comparing a torque command with the torque current component, combined with: recognizing that a motor power line is broken, if the difference between the torque command and the torque current component exceeds a setup value.

Claims 2, 4: the prior art fails to teach or make obvious a motor power line break detection method of an AC servo driver comprising: a current detector; and a torque controller, the method comprising the steps of: applying a three-phase AC voltage so as to allow a magnetizing current not generating a torque in a motor to flow, detecting the consequent current flowing into the motor by the current detector, extracting a magnetizing current component, comparing the magnetizing current with the commanded magnetizing current, combined with: recognizing that a motor power line is broken, if the difference between the magnetizing current and the magnetizing current component exceeds a setup value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
